WE UNDERTAKE

A/C installation:

We offer high quality installation of air conditioning with the use of professional equipment and fine materials.

Service and maintenance:

We provide a full range of repairing and maintenance of air conditioning systems, residential, commercial and HVAC systems.

Pre-season Preparation:

AC systems are regulated appliances, requiring expert maintenance to function at the best rate of energy consumption.

Annual Inspections

An inspection allows a technician to identify dirty coils and burned out contactors before they cause long term damage to your system.

Corporate and HVAC

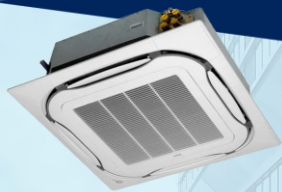

Regular HVAC preventative maintenance is the best way to ensure trouble-free operation and peak performance.

Window Units

Windows AC is the simplest form of an AC system and is mounted on windows or walls. It is a single unit that is assembled in a casing where all the components are located.

Window Units

Windows AC is the simplest form of an AC system and is mounted on windows or walls. It is a single unit that is assembled in a casing where all the components are located.

Split AC:

A split air conditioner consists of two main parts – a compressor located outside and an inside air outlet unit. The single system works well within a small area providing adequate heating or cooling.

Cassette AC:

Cassette air conditioners are widespread and are used for air conditioning of offices, shops, and hotels. They are often preferred in new buildings because of their high energy efficiency and good price.

Floor Standing:

Floor standing Acs are Acs that are installed on or near the floor. These are easy to access and maintain and are popular in homes with little wall space or high ceilings

Ductable Units

A ducted air-conditioning installation is a type of central air conditioning that consists of an air distribution system that is carried out through a series of tubes installed in the false ceiling of the home or premises.

VRV/VRF:

This AC system offers the luxury of Distributed work flow and the independent control.

Chiller

A chiller is a cooling system that removes heat from a liquid coolant via a vapor-compression, adsorption refrigeration, or absorption refrigeration cycles
